*Election/Restrictions*

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: The claims relate to a stabilized solid composition of 4-amino-3-substituted compounds having essentially and infinite number of species including gabapentin, pregabalin, baclofen, etc. In addition, the composition includes a humectant (e.g. the species ethylene glycol, propylene glycol, etc.) and optionally an auxiliary agent.

Applicant is required, in reply to this action, to elect a single species (each from the active compounds, the humectants, and optionally auxiliary agents) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner: Claims 1-9, 12, 13, 16, and 17 broadly include all species, while claims 10, 11, 14, and 15 correspond to species.

The following claim(s) are generic: 1-9, 12, 13, 16, and 17.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the species lack a special technical feature since they differ widely in structure and exhibit different activity. For example, according to The Merck

Art Unit: 1614

Index, gabapentin is an anticonvulsant with the R1 and R2 groups forming a cyclohexane ring, while baclofen is a skeletal muscle relaxant with R1=hydrogen and R2=p-chloro-phenyl.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
